- Related to Bug #3879: Point Perspective Projection significantly clips edges of images added

#2 - 2016-11-01 10:28 AM - Tammy Becker

- Target version set to 3.5.0 (FY17 UserTestPlan Sprint #1)

#3 - 2016-11-02 11:08 AM - Jason Laura

- Status changed from Acknowledged to New

#4 - 2016-11-02 11:58 AM - Jason Laura

- Story points set to 3

Get data from Tammy, output should show the full disc view of a planet. Currently it is clipping, visual inspection.

- Status changed from In Review to Feedback

- Assignee set to Tammy Becker

Here are my comments/suggestions for this UserTestPlan:

- Include setting the ISIS version in the instructions or even add the setting ISIS command to the csh file.
- Include copying the csh file into a different area before running it in the instructions.
- The commands in the csh file output several cubes and it is not immediately clear which ones the user is supposed to be visually comparing. For "ExpectedResult", "ActualResult", and "ValidationSteps" it would be helpful to have the actual file names for the cubes that the user must look at side by side and identify which one is the "correct" appearance for comparison.
- Perhaps, in the csh file, have the last command open qview with the exact files that the user must visually compare.
